ABSTRACT

This final volume of a four-volume report on highway safety manpower includes conclusions and recommendations regarding prospects for staffing individual programs, with emphasis on the adequacy of both manpower resources and training capacity. The data indicate that reaching maximum staffing levels by 1977 is unlikely, although minimum levels probably can be achieved. The study highlights the need for expanded refresher training for high school skill level jobs and both post-recruitment and refresher training for college skill level jobs. The report recommends the development of a plan for state action in safety manpower, with guidance and funding by the National Highway Safety Bureau. The first three volumes of the report are available as VT 013 321 and VT 013 322. (BH)

Reference: Contract FH-11-6496, "Safety Specialist Manpower"

Dear Dr. Tarrants:

We take pleasure in submitting to you this report presenting the conclusions and recommendations of the Safety Specialist Manpower Study. The enclosed report is the last of four dealing with the staffing of state government programs in highway safety. It is based upon data presented in three earlier reports.

The report presents conclusions pertaining to the:

- Adequacy of manpower resources to satisfy requirements
- Adequacy of training capacity to prepare manpower resources for safety specialist jobs
- Prospects for staffing individual highway safety programs

The report also presents recommendations that the states and the National Highway Safety Bureau can implement to promote adequate staffing of the highway safety program. The first set of recommendations provides a plan for state action in safety manpower.

In reaching conclusions regarding the adequacy of manpower resources, manpower requirements are compared to the available manpower pool. Of particular importance is the growth in the proportion of the pool required for highway safety jobs. Staffing of highway safety programs is not simply a matter of adding more personnel. Most state government programs will increase personnel during the next decade. The Highway Safety Bureau is confronted with the task of enlarging its share of new recruits from the manpower resources pool. By comparing the ratio of manpower requirements to resources in 1968 and in 1977, a judgment is possible regarding the likelihood of filling 1977 requirements.

Conclusions regarding the adequacy of training capacity are based on a comparison of average annual increases in requirements over the 1968 to 1977 decade to average annual enrollment capacities. Appendix A of this volume gives average annual increases in requirements and average annual training capacity by job title and by program for each state and for the nation. The "adequacy" of training capacity is a function

of the time available for training the numbers of required specialists. The full decade 1968 to 1977 is used in this report.

Major conclusions and recommendations of the study are as follows:

- Minimum staffing levels can probably be attained by 1977, but staffing at maximum levels is doubtful.
- Significant training capacity exists or is planned, but capacity must be expanded for:
  - Refresher training for high school skill level jobs
  - Post-recruitment training for college skill level jobs
  - Refresher training for college skill level jobs
- States should develop their individual staffing plans and organize recruitment and training programs oriented to highway safety.
- States should assume responsibility for organizing training for most high school skill level jobs.
- States should take steps to make employment in safety specialist jobs attractive, including establishing several career fields.
- The National Highway Safety Bureau should provide program planning guidance to the states.
- The National Highway Safety Bureau should assume responsibility for organizing training for college skill level jobs.

. The National Highway Safety Bureau should be prepared to provide direct assistance, including funding, to aid the state training efforts.

* * * *

We have enjoyed the opportunity to participate in this study and wish to extend our appreciation to the National Highway Safety Bureau and to the many officials of state and private organizations who gave us their aid and cooperation throughout this assignment.

Very truly yours,

Booz, Allen & Hamilton Inc.

I. INTRODUCTION

I. INTRODUCTION

This is the fourth and final volume of the Safety Specialist Manpower Study. Previous volumes have dealt with manpower requirements, manpower resources, and manpower training. This volume brings together results presented in these prior volumes to provide an overall understanding of the state safety manpower staffing task.

1. THIS VOLUME PRESENTS CONCLUSIONS AND RECOMMENDATIONS APPLICABLE TO STAFFING STATE HIGHWAY SAFETY PROGRAMS

Drawing upon data presented in the earlier three volumes, this volume presents conclusions regarding:

- Adequacy of manpower resources to satisfy requirements
- Adequacy of training capacity to prepare manpower resources for safety specialists jobs
- Prospects for staffing individual highway safety programs
- Recommended steps that the states and the National Highway Safety Bureau can take to assure adequate staffing of the National Highway Safety Program

The volume is divided into five chapters: this introduction, chapters presenting conclusions for each of the three aspects of safety

manpower (requirements, resources, training), and a chapter presenting recommendations. Two appendixes follow the text of the report.

Appendix A compares annual increases in manpower requirements to annual training capacity. Comparisons are presented for each state and for the nation by year, from 1968 to 1977, and by job title. A ten-year total and an annual average is given for each estimate of requirement increases and training capacity. Comparison of annual average increases in requirements to annual average training capacity permits an estimate of the adequacy of training capacity.

Appendix B presents a national summary by job title of safety refresher training identified in the states. Enrollment capacity is given by year for the decade 1968 to 1977.

II. MANNING LEVELS

II. MANNING LEVELS

Volume II presented estimates of manpower resources and forecasted the numbers of safety specialists which states will be able to employ if recruitment efforts were to be continued at present levels. It also pointed out that deficiencies in employed safety specialists could develop if new recruitment measures are not instituted.

This chapter continues the line of reasoning introduced in Volume II and seeks to answer the question: If recruitment efforts are expanded, can safety specialist manpower requirements be met?

1. THIS ANALYSIS ASSUMES A TEN-YEAR PROGRAM

A ten-year program is assumed throughout the entirety of this manning level analysis. This assumption is consistent with guidance provided for the study by the National Highway Safety Bureau. Practically, the assumption results in a ten-year implementation period with manning levels being attained at the end of fiscal year 1977. These manning levels constitute the safety specialist manpower requirements presented in Volume I.

2. IN THIS CHAPTER, DEMAND FOR MANPOWER RESOURCES IS COMPARED TO SUPPLY

Volume II described the overall methodology used in estimating the adequacy of the manpower resources pool. It pointed out that the overall approach is to compare demand to supply. This chapter undertakes this comparison.

Exhibit I and Exhibit II, following this page, are based upon the National Summary of Manpower Needs and Availability presented in Appendix A of Volume II. The exhibits give the ratio, expressed in percentages, of the requirements estimated for each year to the manpower resources estimated for that year. Ratios are presented for each year and for each alternative estimate of requirements, for Estimated Manpower Available and for Estimated Total Manpower, by high school and college skill level. * Exhibit I gives ratios for all programs. To examine ratios and adequacy of the manpower pool if the two major programs using resources are omitted. Exhibit II excludes safety specialists requirements for the Police Traffic Services and Driver Education programs. In Exhibit II teachers, also, are excluded from college skill lead supply in order to note the effect of omitting this major resource category.

---

* Estimated Total Manpower is the total pool of manpower 21 years of age and older with the required level of skills. Estimated Manpower Available is the manpower pool 21 years of age and older with the required skills who are immediately available for employment by state governments. These terms were originally defined and used in Volume II.

PERCENTAGE COMPARISONS OF REQUIREMENTS
TO RESOURCES--ALL PROGRAMS*

	1968	1969	1970	1971	1972	1973	1974	1975	1976	1977
Requirements to Manpower Available										
High School										
. State	5.6	6.4	7.0	7.0	7.0	7.1	7.1	7.1	6.9	6.7
. Alternative 1	24.4	24.1	23.7	23.3	23.1	22.7	22.3	22.0	21.6	21.1
. Alternative 2	8.0	7.9	7.7	7.6	7.5	7.4	7.3	7.1	7.0	6.9
College										
. State	1.4	1.5	1.6	1.6	1.6	1.6	1.6	1.6	1.6	1.5
. Alternative 1	1.9	1.9	1.9	2.0	2.0	2.0	2.1	2.1	2.2	2.2
. Alternative 2	0.9	1.0	1.0	1.0	1.0	1.0	1.0	1.1	1.1	1.1
Requirements to Total Manpower										
High School										
. State	0.11	0.12	0.13	0.13	0.13	0.13	0.13	0.13	0.13	0.13
. Alternative 1	0.46	0.45	0.45	0.44	0.44	0.43	0.42	0.42	0.41	0.40
. Alternative 2	0.15	0.15	0.15	0.14	0.14	0.14	0.14	0.13	0.13	0.13
College										
. State	0.22	0.23	0.24	0.23	0.23	0.22	0.21	0.21	0.20	0.19
. Alternative 1	0.30	0.29	0.29	0.29	0.28	0.28	0.28	0.27	0.27	0.27
. Alternative 2	0.15	0.15	0.15	0.14	0.14	0.14	0.14	0.14	0.14	0.14

* The ratio of requirements to resources is given by the percentages in these tables. For example, in 1968, State Estimated requirements for high school skill level jobs are 5.6% of resources immediately available at the high school skill level. In 1977, for Alternative 2 estimated requirements, requirements are 6.9% of resources immediately available. Thus, to attain the Alternative 2 1977 manning level, employed safety specialists must increase from 5.6% to 6.9% of immediately available resources.

. Alternative 2	2.28	2.17	2.09	2.02	1.94	1.88	1.81	1.75	1.70	1.65
Requirements to Total Manpower										
High School										
. State	0.03	0.03	0.03	0.03	0.03	0.03	0.03	0.03	0.03	0.03
. Alternative 1	0.13	0.13	0.13	0.13	0.13	0.13	0.13	0.13	0.13	0.12
. Alternative 2	0.03	0.04	0.04	0.04	0.04	0.04	0.04	0.04	0.04	0.04
College										
. State	0.02	0.02	0.02	0.02	0.02	0.02	0.02	0.02	0.02	0.02
. Alternative 1	0.10	0.09	0.09	0.09	0.08	0.08	0.08	0.08	0.07	0.07
. Alternative 2	0.04	0.04	0.04	0.04	0.04	0.04	0.03	0.03	0.03	0.03

By examining these percentages, it is possible to determine:

- Ratio of requirements to supply
- Change in the ratio of requirements to supply from 1968 to 1977

3. DEMAND (REQUIREMENTS) FOR SAFETY SPECIALISTS IS A VERY SMALL PROPORTION OF TOTAL SUPPLY

Comments here apply to the ratios of Requirements to Total Manpower, i.e., estimated total manpower with the required skill level. They also apply to 1977 as the target year for implementation.

The most striking aspect of both exhibits is the very low percentage shown. None of the percentages exceeds one-half of one percent. In Exhibit II, the percentages drop into the hundredths of one percentage range.

In Exhibit I, the 1977 ratios of requirements to total supply at the high school skill level range from 0.40% for Alternative 1 to 0.13% for Alternative 2 and State; at the college skill level, from 0.27% for Alternative 1 to 0.14% for Alternative 2. In Exhibit II, the ratios at the high school skill level range from 0.12% for Alternative 1 to 0.03% for State; at the college skill level, from 0.07% for Alternative 1 to 0.02% for State.

These calculations make it reasonable to conclude that demand for safety specialist manpower does not exert noticeable pressure on total supply. The problem in staffing highway safety programs, therefore, is not one of inadequate supply of persons with basic skill levels, but one of influencing the distribution of supply (and perhaps provision of training).

4. STATE AND ALTERNATIVE 2 MANNING LEVELS SEEM CAPABLE OF ATTAINMENT FROM SUPPLY OF AVAILABLE MANPOWER

Comments under this and the following point apply to the ratios of Requirements to Manpower Available. They consider:

- The 1977 ratio of requirements to supply
- The change from the 1968 State ratio (actual current ratio) to the 1977 ratio for each alternative
- State and Alternative 2 only

In Exhibit I, the 1968 State ratio for the high school skill level is 5.6%. Percentages increase to 6.7% for the State ratio and 6.9% for the Alternative 2 ratio in 1977. This represents a 19.6% increase in the State percentage ratio and a 23.2% increase in the Alternative 2 percentage ratio. (In examining changes in ratios in this chapter, we are looking at changes in percentages, e.g., the percentage ratio increase from 50% to 75% is 50%.)

At the college skill level, the 1968 State ratio is 1.4%. Percentages increase to 1.5% for the State ratio and decrease to 1.1% for the Alternative 2 ratio in 1977. Thus, the percentage over the 10 years is either stable or decreases.

In Exhibit II, the 1968 State ratio for the high school skill level is 1.42%. Percentages increase to 1.53% for the State ratio and 1.99% for the Alternative 2 ratio in 1977. The first represents an 8% increase; the second, a 40% increase.

At the college skill level, the 1968 ratio of requirements to available manpower is 1.03%. Percentages decrease to 0.98% for the State ratio and increase to 1.65% for the Alternative 2 ratio in 1977. The first represents a slight decrease, the second, a 60% increase.

Examination of Exhibit I and Exhibit II reveals:

- Ratios of less than 2% in six of the eight cases.
- In the two exceptional cases where ratios reach almost 7%, the 1968 base is relatively high at 5.6%. An increase of only 20% to 25% is required over the 10 years.
- The maximum increase for the 10 years is 68%. The increase occurs for the Alternative 2 ratio at the college skill level with Driver Education excluded. Even with the increase, however, 1977 requirements will constitute only 1.65% of Manpower Available.

Thus, 1977 ratios of requirements to resources are so low and increases in ratios for the 10 years are sufficiently moderate, so that it seems reasonable to expect State and Alternative 2 manning levels to be capable of attainment if recruitment efforts are expanded.

5. ATTAINMENT OF ALTERNATIVE 1 MANNING LEVELS IS DOUBTFUL

In Exhibit I, the high school skill level 1977 ratio for Alternative I is 21.1%. This represents a 377% increase from the 1968 State ratio of 5.6%. The college skill level ratio is 2.2%, a 57% increase from the 1968 State ratio of 1.4%.

In Exhibit II, the high school skill level 1977 ratio for Alternative I is 6.55%, an increase of 461% from the 1968 State ratio of 1.42%. The college skill level ratio is 3.68%, an increase of 357% over the 1968 State ratio of 1.03%.

Thus, in three of the four cases, increases over the 10 years exceed 350%. Manpower requirements, with the Police Traffic Services program included, exceed 20% of all high school graduates immediately available for State government employment.

Clearly then, the proportion of available manpower resources devoted to highway safety programs must change substantially if

Alternative I manning levels are to be attained. The obverse, of course, is that the proportion of resources devoted to other programs must decline. The problem from the point of view of state governments is one of considering the shifting of program priorities. With the possible exception of the 20% ratio, absolute 1977 percentages seem low enough to be attainable in 10 years if the State and Federal Governments are willing to place sufficient priority on highway safety. The problem, then, is not one of insufficient resources, but of management priorities.

The problems of redistribution of resources can be illuminated somewhat by the table shown below. The percentages refer to the proportion of total 1966 state government employees working in each functional area.

Education	39.2%
Highways	13.2
Health and hospitals	19.1
Police protection	2.0
Natural resources	5.9
Financial administration	3.7
All other	16.9
	100.0%

Source: U. S. Statistical Abstract, 1968, p. 429.

Although definitive statements cannot be made regarding program priorities in 1977, the percentages of manpower required for implementing Alternative 1 are high enough to make attainment doubtful.

6. ATTAINMENT OF ALTERNATIVE 1 MANNING LEVELS CAN VARY BY PROGRAM

Attainment of manning levels among highway safety programs can vary. Alternative 1 manning levels (or manning levels significantly above Alternative 2 and current State Estimates) may be attained for individual program areas if, within the overall State Highway Safety Program, certain areas are given priority. Identification of priority areas should result from future research and cost/benefit studies in highway safety.

Additionally, some programs draw upon particular segments of the manpower pool. The Driver Education Program, for example, is heavily dependent upon the teacher portion of the pool. Special characteristics of these segments can effect manning levels. Discussion of these particular problems is presented in Chapter IV.

III. TRAINING CAPACITY

III. TRAINING CAPACITY

In Chapter II it was demonstrated that:

- Sufficient aggregate manpower resources are available to staff state highway safety programs.
- It is reasonable to expect that at least minimum manning levels are attainable.

If sufficient manpower is available, it remains to be seen whether there is sufficient training capacity available to train resources. This chapter addresses this question and examines the adequacy of current and projected training and educational enrollment capacity. In doing so, it draws upon data presented in Appendix A. (This chapter does not examine the quality of course content. Volume III, in classifying courses as "complete" and "partial," judged the adequacy of courses in terms of subjects taught and length of instruction.)

Appendix A is a compilation of certain data from Appendix E of Volume I and Appendix B of Volume III. It is designed to facilitate a comparison, for each state and the nation, of 10-year manpower requirements to 10-year training capacity. Requirements and training capacity are presented for each safety specialist job title by highway safety program area.

Manpower requirement numbers are given for each of three alternatives: State Estimate, Alternative 1, and Alternative 2. Numbers are derived from manpower requirements estimates given in Appendix E of Volume I. Estimates shown in Appendix E of Volume I are total manpower requirements in a given year. Requirement numbers shown in Appendix A of this volume represent additional manpower required in a given year, beyond those employed in 1968.

- The 1968 State Estimate is always zero since it is the base from which changes are computed.
- Numbers shown for Alternative 1 and Alternative 2 in 1968 represent additional requirements above the 1968 State Estimate, i.e., they are the differences between Alternative 1 (or Alternative 2) and the State Estimate shown in Appendix E of Volume I (when Alternative 1 or Alternative 2 is greater than the State Estimate).
- Numbers shown for years other than 1968 for all three alternatives are additional requirements above those of the previous year.
- Zeros are shown for each year in which the Alternative 1 (or Alternative 2) requirements are less than the 1968 State Estimate. Numbers are recorded for the year in which Alternative 1 (or Alternative 2) first exceeds the 1968 State Estimates. Following that entry, annual increases are recorded as explained above.

Using this methodology, Appendix A of this volume shows additional manpower requirements beyond state safety specialists employed in 1968.

This manpower must be trained. (The manpower numbers do not equate to entering training levels because the latter must allow for turnover rates in employment and for those entering training but not completing it.)

Complete and partial training numbers shown in Appendix A are direct reproductions of numbers presented in Appendix B of Volume III. They indicate annual enrollment capacity for a job title.

The numbers in the "10-Year Total" column of Appendix A are obtained by adding the numbers shown in each row.

The numbers shown in the "Average/Year" column are obtained by dividing 10-year totals:

- By 9 for manpower requirements to give the average annual increase in requirements after 1968
- By 10 for training capacity to give the average annual enrollment capacity during the 10-year period

The "Average/Year" column presents, then, a comparison of average increases in required manpower to average enrollment capacity. It thus provides an indication of the adequacy of current and planned training capacity.

1. SIX GENERAL CATEGORIES OF TRAINING PERTAIN TO SAFETY SPECIALIST JOBS

For analytical purposes, six categories of training relevant to safety specialist jobs can be identified. These categories are:

- Pre-entry training for high school skill level jobs
- Post-recruitment training for high school skill level jobs
- Refresher training for high school skill level jobs
- Pre-entry training for college skill level jobs
- Post-recruitment training for college skill level jobs
- Refresher training for college skill level jobs

Training capacity will be discussed for each of these categories.

2. PRE-ENTRY TRAINING FOR HIGH SCHOOL SKILL LEVEL JOBS IS PRESUMED TO BE AVAILABLE

Pre-entry training for high school skill level jobs consists simply of a high school education. The manpower pool is defined to include persons with at least a high school education. Pre-entry training for high school graduate jobs is, therefore, presumed to be available.

3. POST-RECRUITMENT TRAINING FOR HIGH SCHOOL SKILL LEVEL JOBS IS LARGELY AVAILABLE

Post-recruitment training is the training category in which safety specialist training is furnished to high school graduates. It is the category into which most in-service training identified in Volume III falls.

Exhibit III, following this page, consolidates the national summary of Appendix A for high school skill level jobs. Jobs included in the exhibit are identical to those identified as high school skill level jobs in Volume II.

- A refinement has been added to the manpower requirements numbers. Some jobs serve as the entering level jobs in a career ladder, (e.g., Police Traffic Services Patrolman). Recruitment and training needs at the entering level are a combination of needs at this level plus those at higher levels. For example, increased requirements for Police Traffic Services Officers will lead to promotions of Police Traffic Services Patrolmen and, thus, to recruitment needs at the Patrolman level. This "pyramiding" of needs has been reflected in Exhibit III (and in Exhibit IV, following page 20, for college skill level jobs).

Examination of Exhibit III reveals that the average annual enrollment capacity in programs offering complete training is:

- 4.2 times the average annual increase in State Estimated manpower requirements
- 56.4% the average annual increase in Alternative 1 manpower requirements

EXHIBIT III

National Highway Safety Bureau
U. S. Department of Transportation

COMPARISON OF ANNUAL MANPOWER
REQUIREMENT INCREASES TO TRAINING CAPACITY--
HIGH SCHOOL SKILL LEVEL NATIONAL SUMMARY

	1968	1969	1970	1971	1972	1973	1974	1975	1976	1976	10-Year Total	Average/ Year
State	0	7,271	5,035	2,021	1,878	1,908	1,942	1,712	260	117	22,144	2,460
Alternative 1	142,048	2,683	2,530	2,285	2,993	2,313	2,640	2,539	2,899	2,714	165,644	18,404
Alternative 2	20,680	316	599	539	512	574	575	571	610	636	25,612	2,847
Complete Training	7,540	9,283	10,557	10,618	10,720	10,827	10,999	11,074	11,115	11,154	103,887	10,389
Partial Training	5,666	4,103	4,775	4,829	4,783	4,852	4,791	4,875	4,795	4,875	48,344	4,834

- 3.6 times the average annual increase in Alternative 2 manpower requirements

Average annual enrollment in programs offering partial training is:

- 2 times the average annual increase in State Estimated manpower requirements
- 26.2% of the average annual increase in Alternative 1 manpower requirements
- 1.7 times the average annual increase in Alternative 2 manpower requirements

The average annual complete training capacity of 10,389 is significantly affected by two specific cases.

- Maryland training programs include an annual enrollment capacity for 2,000 wrecker operators.
- West Virginia training includes annual capacity for 1,400 Engineering Aides, Safety. Uncertainty exists as to whether this training program provides the education specified in the job description in Volume I. However, to be complete, the program has been included as noted here.

The average annual complete training capacity is also affected somewhat by multiple year programs. However, neither the number of these programs nor the number of enrollees is believed to be great.

Thus, even after adjustments are made, the average annual complete training capacity should exceed average annual increases in manpower requirements for the two alternatives whose manning levels are likely to be attained. This, of course, does not imply that all training capacity is adequate for every high school skill level job title. It does imply that capacity exists or is planned which will satisfy the major portion of needed training.

This result occurs because:

- Attainment of manning levels and training is spread over 10 years rather than concentrated in a few early years. Current training capacity is stated to be flexible and capable of expanding enough to accomplish needed training if program buildup and training is spread over a number of years.

- There is sufficient capacity in every year to train State Estimated additions in requirements (i. e., no training problem exists).

- There is sufficient training capacity in every year after 1968 to train additional annual Alternative 1 requirements, but the capacity is not great enough to work off additional 1968 requirements spread over the 10 years (i. e., training capacity is insufficient to train all additional Alternative 1 requirements, even in 10 years).

- There is sufficient training capacity in every year after 1968 to train annual additions to Alternative 2 requirements, and the capacity is great enough to work off the 1968 backlog by the end of 1970 (assuming recruitment and training in 1968, otherwise 1971).

- The job titles requiring the greatest numbers of employees (e.g., Police Traffic Services Patrolman, Driver License Examiners) already have large numbers of persons working and sizeable training programs. Additional personnel requirements, therefore, impose only a fractional increase in existing training programs which state training agencies feel they can handle. Stated in reverse, job titles for which there is little existing training tend to require relatively few people. Training needs generated by these job titles are only a small function of the overall training problem.

- Once additional training capacity has been created it continues for some time, although annual increases in requirements may decline and the capacity may not be fully utilized. For example, in Exhibit III complete training capacity increases from 9,238 in 1969 to 10,557 in 1970. One can assume then that complete training capacity will at least approximate 10,500 in 1971. However, State Estimates of new requirements decline from 7,271 in 1969 to 5,035 in 1970 to 2,021 in 1971.

This last point highlights an important consideration in developing Safety Manpower Training programs. Training (and recruitment) programs should be designed to assure a smooth flow in trained personnel consistent with a program buildup phased over a specified time period. The time period assumed by this study has been 10 years.

4. FORMAL REFRESHER TRAINING FOR HIGH SCHOOL SKILL LEVEL JOBS IS INADEQUATE

Refresher training for high school skill level jobs is often available but subject to work load pressures. It is offered when work

load permits. The informality and infrequency with which refresher training is approached has limited the number of enrollees in formal courses offered in 1968 to 10,500. The number is expected to rise to about 13,600 in 1977. However, manpower requirements in high school skill level jobs in 1977 are about 57,000 for the State Estimate and about 59,000 for the Alternative 2 Estimate. Thus, formal refresher training must be considerably expanded. However, this category of training is ordinarily not difficult to organize and present.

5. PRE-ENTRY TRAINING FOR SOME COLLEGE SKILL LEVEL JOBS IS PRESUMED TO BE AVAILABLE

Nine college skill level jobs require no pre-entry safety training. To the extent that specific training is indicated as part of the entering educational requirement for these jobs, the training is so widely available as to cause no practical problems. Such training is normally in the fields of management or law. Therefore, this study assumes that this training is available as part of the states' general higher educational programs. The job titles for which this assumption is made are:

- Governor's Highway Safety Program Director
- Highway Safety Program Analyst
- Highway Safety Program Information Officer
- Codes and Laws Program Specialist
- Traffic Court Judge
- Traffic Court Program Specialist
- Alcohol Technical Specialist
- Traffic Records Program Specialist
- Traffic Records Systems Analyst

6. PRE-ENTRY SAFETY TRAINING FOR THE REMAINING COLLEGE SKILL LEVEL JOBS IS LARGELY AVAILABLE

The specified or implied pre-entry training requirements for 13 job titles which require a college degree are not necessarily available. These job titles are:

- Driver Training Program Specialist
- Driver Education Supervisor
- Driver Education Teacher
- Driver Retraining Instructor
- Accident Site Investigator (Traffic Engineer and Highway Engineer)
- Emergency Medical Services Program Specialist
- Emergency Medical Services Field Representative
- Highway Engineer, Safety
- Traffic Engineer
- Pedestrian Safety Program Specialist
- State Wrecker Field Representative
- School Bus Program Specialist
- School Bus Driver Training Officer

Exhibit IV, following this page, is the college skill level counterpart to Exhibit II. It also is based upon data in Appendix A of this Volume.

EXHIBIT IV

National Highway Safety Bureau
U. S. Department of Transportation

COMPARISON OF ANNUAL MANPOWER
REQUIREMENT INCREASES TO TRAINING CAPACITY--
COLLEGE SKILL LEVEL NATIONAL SUMMARY

	1968	1969	1970	1971	1972	1973	1974	1975	1976	1977	10-Year Total	Average/ Year
State	0	2,871	3,202	680	686	669	703	663	24	22	9,520	1,055
Alternative 1	29,194	508	553	561	600	629	2,194	2,226	1,838	2,414	40,717	4,524
Alternative 2	14,069	22	264	243	228	281	269	265	297	314	16,252	1,804
Complete Training	5,150	5,887	6,503	6,763	7,025	7,286	7,547	7,809	7,815	7,812	69,597	6,960
Partial Training	5,084	4,978	5,314	5,383	5,468	5,540	5,623	5,702	5,717	5,707	54,512	5,452

Examination of Exhibit IV reveals that the average annual enrollment capacity in college level programs offering complete training is:

- 6.6 times the average annual increase in the State Estimate of manpower requirements
- 1.2 times the average annual increase in Alternative 1 manpower requirements
- 3.9 times the average annual increase in Alternative 2 manpower requirements

Average annual enrollment in programs offering partial training is:

- 5.2 times the average annual increase in the State Estimate of manpower requirements
- 1.2 times the average annual increase in Alternative 1 manpower requirements
- 3.0 times the average annual increase in Alternative 2 manpower requirements

The college skill level, even more than the high school skill level, is affected by multiple year enrollments. However, training capacity is so much greater than annual manpower requirement increases for Alternative 2 and the State Estimate that adjusting reductions should not change the fundamental conclusion--i.e., pre-entry training is largely available for State Estimate and Alternative 2 Estimate safety manpower requirements.

The distribution of training among states is not so important for college graduate jobs as for high school graduate jobs because of greater mobility among college graduates. National (or regional) rather than state capacity is the primary consideration.

Factors contributing to the adequacy of college level training capacity are similar to those that explain post-recruitment high school skill level training capacity.

- Training is spread over a 10-year period rather than consolidated in a few years.
- Job titles and programs with major manpower requirements (e.g., Driver Education Teacher; Highway Engineer, Safety; and Traffic Engineer) are already well established with sizeable training programs.
- Training capacity, once established, tends to continue.

Sufficient capacity exists in programs offering complete college level training to:

- Satisfy State Estimates of additional requirements in every year
- Satisfy Alternative 1 Estimates of additional requirements in every year after 1968 and to work off the 1968 backlog by 1973 or 1974
- Satisfy Alternative 2 Estimates of additional requirements in every year after 1968 and to work off the 1968 backlog by the end of 1970

Review of individual job titles suggestes that there should be no serious deficit in pre-entry training capacity for any college level job title. This is largely attributable to the widespread availability of driver education training. Several of the job titles for which no specific pre-entry training is shown in Appendix A have the training applicable to driver education teachers specified for them in the job descriptions of Volume I.

7. POST-RECRUITMENT TRAINING FOR COLLEGE SKILL LEVEL JOBS IS ALMOST COMPLETELY UNAVAILABLE

This category of training is designed to prepare college graduates in the specific area of highway safety. It emphasizes particularly the National Highway Safety Program, and is in addition to the entering educational requirements.

In most instances, these educational requirements are generated by the National Highway Safety Program and the development of safety specialist job descriptions. The requirements did not exist formally prior to the program. Consequently, no training capacity was identified during field visits. For all practical purposes, no training now exists and requisite capacity must be developed. Assuming no retraining of currently employed staff, post-recruitment training capacity must be developed to train:

- An average of 1, 100 persons per year if State Estimates of requirements are to be met

- An average of 1,800 persons per year if Alternative 2 requirements are to be met

8. FORMAL REFRESHER TRAINING FOR COLLEGE GRADUATES IS INADEQUATE

In refresher training, there is significantly less capacity at the college skill level than at the high school skill level. Capacity for only 2,200 enrollments was identified for college skill level jobs in 1968. Capacity is expected to rise to about 3,000 in 1977. Manpower requirements in 1977 are estimated to be about 38,000 for the State Estimate and 27,000 for the Alternative 2 Estimate. Thus, refresher training for college skill level safety specialists must be expanded very substantially.

9. SUFFICIENT TRAINING CAPACITY MAY EXIST TO RETRAIN CURRENT SAFETY SPECIALISTS

On the basis of 10-year, complete training enrollment totals shown in Exhibit I and Exhibit II, sufficient capacity will exist to train new safety manpower based on the State Estimate and Alternative 2 and to retrain current safety specialists.

- Ten-year total capacity at the high school skill level is 104,000. Total manpower requirements in 1977 for the State Estimate are 57,000; for the Alternative 2 Estimate, 59,000.

- Ten-year total capacity at the college skill level is 70,000. Total manpower requirements in 1977 for the State Estimate are 38,000; for the Alternative 2 Estimate, 27,000.

Even if adjustment reductions (e.g., for multiple year enrollments) are made in estimated training capacity, it appears that, for identified training, capacity exists above that needed to train safety specialists to satisfy the State and Alternative 2 Requirements Estimates. This capacity can be used to retrain current safety specialists--or to train additional manpower beyond the State Estimate and Alternative 2 Estimate. Thus, the capacity available for retraining will depend upon manning levels actually implemented.

* * * *

In summary, the major deficits in current and planned safety specialist training capacity exist for:

- Refresher training for high school skill level jobs
- Post-recruitment training for college skill level jobs
- Refresher training for college skill level jobs

IV. PROGRAM STAFFING

IV. PROGRAM STAFFING

Chapter II and Chapter III examined manpower resources and training capacity for all program areas. Additionally, specific problems and considerations apply to individual program areas. This chapter examines the task of staffing highway safety programs primarily at the individual program level.

For analytical purpposes, programs are divided into three categories.

. Those programs utilizing high school skill level jobs only:

- Periodic Motor Vehicle Inspection
- Motorcycle Safety
- Driver Licensing
- Police Traffic Services

. Those programs utilizing college skill level jobs only:

- Planning and Administration
- Driver Education
- Codes and Laws
- Traffic Courts
- Traffic Records
- Emergency Medical Services

. Programs utilizing both high school and college skill level jobs:

- Alcohol in Relation to Highway Safety

- Identification and Surveillance of Accident Locations
- Highway Design, Construction, and Maintenance
- Traffic Control Devices
- Pedestrian Safety
- Accident Cleanup
- School Bus Safety

1. FOR THREE PROGRAMS REQUIRING HIGH SCHOOL SKILL LEVEL JOBS ONLY, ATTAINMENT OF ALL MANNING LEVELS SHOULD BE POSSIBLE, BUT SOME EXPANSION OF POST-RECRUITMENT AND REFRESHER TRAINING CAPACITY IS NEEDED TO SATISFY MINIMUM LEVELS

No major problem in staffing is expected for:

. Periodic Motor Vehicle Inspection (assuming inspections in private garages)

. Motorcycle Safety (assuming inspections in private garages)

. Driver Licensing

Volume II suggested that if safety specialist requirements are a small portion of total supply, then it could be expected that requirements would be filled. This expectation was based on the assumptions that:

. Filling requirements of a particular program is a problem of distribution within the total supply.

. Distribution of supply is flexible and can be influenced.

Chapter II of this volume demonstrated that total safety specialist requirements are a small portion of supply. We have identified no unusual requirements for jobs in these three programs that would negate the assumption of flexible distribution. There are no inherent obstructions to the flow of manpower into available jobs. Therefore, if jobs are made available, no unusual recruitment problems should be encountered. Alternative 2 and State Estimated requirements should be filled. If these programs are given priority among the 18 highway safety program areas, there should be no obstruction to fulfillment of Alternative 1 requirements. (These conclusions do not apply if experience as a Police Traffic Services Patrolman is required by the states. The Police Traffic Services program is discussed in major point 2, below.)

Since these programs utilize only high school skill level job titles (Motor Vehicle Station Inspector, Driver License Examiner, and Driver License Hearing Officer), pre-entry training is presumed and presents no problem.

Average annual post-recruitment training capacity exceeds Alternative 2 average annual need for Motor Vehicle Station Inspector and Driver License Examiner. Training for Driver License Hearing Officer must be expanded.

Post-recruitment training capacity must be expanded for Motor Vehicle Station Inspector and Driver License Hearing Officers to attain manning levels estimated by the states.

Refresher training is adequate only for the Motor Vehicle Station Inspector, Alternative 2 Estimate.

Thus, deficits in current and planned training capacity do exist. However, training required for these programs is not of long duration or technically complex.

2. FOR THE POLICE TRAFFIC SERVICES PROGRAM, SOME DIFFICULTY MAY BE EXPERIENCED IN STAFFING, AND REFRESHER TRAINING MUST BE EXPANDED TO SATISFY, MINIMUM MANNING LEVELS

In contrast to the prior three programs, unusual requirements have been identified for Police Traffic Services jobs. Most state police/highway patrol departments specify physical as well as educational requirements. Normally, persons at least 5'9" in height with proportional weight are specified. Considering that the average height in the United States is likely to be approximately 5'9," one-half of the manpower resources pool is unavailable to the Police Traffic Services program. Some state highway patrol/state police departments are already finding filling of personnel billets to be difficult (for reasons not necessarily limited to physical specifications).

A complicating factor is the recent emphasis being placed upon criminal law enforcement in the United States. Requirements shown for Police Traffic Services apply only to highway safety programs. Requirements can almost certainly be expected to expand from current levels for criminal programs. The resource pool must provide manpower to staff both programs.

The combination of these two factors may make attainment of manning levels for the State Estimate and Alternative 2 Estimate, as well as Alternative 1, difficult. On balance, however, we continue to believe the minimum levels are capable of attainment. We are very doubtful that Alternative 1 levels can be attained.

As with the prior three programs, pre-entry training is assumed to be available.

Average annual post-recruitment training capacity exceeds average annual need estimated by the States and Alternative 2 for the three Police Traffic Services job titles. To satisfy Alternative 1 needs, training capacity must be expanded for Police Traffic Services Program Specialists and Police Traffic Services Patrolman.

Refresher training is inadequate for any job title, for all of the three manning levels.

Experience with training programs is extensive in state police/highway patrol departments. These departments respond well to expanding training for minimum manning levels.

3. FOR FOUR PROGRAMS REQUIRING COLLEGE SKILL LEVEL JOBS ONLY, ATTAINMENT OF ALL MANNING LEVELS SHOULD BE POSSIBLE, BUT POST-RECRUITMENT AND REFRESHER TRAINING CAPACITY MUST BE EXPANDED TO SATISFY MINIMUM LEVELS

For four programs requiring only college skill level safety specialists, no major staffing problems are expected. These programs are:

- Planning and Administration
- Codes and Laws
- Traffic Courts
- Traffic Records

These four programs include only safety specialist job titles for which pre-entry training is presumed to be available. No unusual experience is specified in job descriptions, and no other unusual requirements have been identified. There are, therefore, no obstructions to the flow of personnel into these job titles.

Manpower requirements for these programs are relatively few. Only Traffic Court Judges are required in significant quantities.

Thus, given the large resource pool from which these programs draw, the lack of obstruction to recruitment from this pool, and the relatively limited requirements, no major problems in staffing these four programs should be encountered. In fact, staffing at Alternative 1 levels seems possible. In addition, attainment of staffing levels early in the 10-year program seems to be a distinct possibility.

Post-recruitment training is almost completely unavaible, although sufficient capacity has been identified in Michigan to satisfy National Highway Safety Program Analyst requirements. National capacity must be provided to train annually up to 240 Traffic Court Judges for Alternative 1 or 155 Traffic Court Justices for Alternative 2.

Refresher training is inadequate for every job title in the four programs. Current and planned capacity has been identified only for Traffic Court Judges.

4. FOR TWO PROGRAMS REQUIRING COLLEGE SKILL LEVEL JOBS ONLY, SOME DIFFICULTY MAY BE EXPERIENCED IN STAFFING, AND POST-RECRUITMENT AND REFRESHER TRAINING CAPACITY MUST BE EXPANDED FOR MINIMUM MANNING LEVELS

For all programs discussed to this point, the recruitment and training pattern has been clear: first recruit and then provide post-recruitment training. This has been possible because pre-entry

training was presumed to be available. However, pre-entry training is not always presumed to be available. Two programs requiring college skill level jobs only, for which pre-entry training is not presumed, are:

- Driver Education
- Emergency Medical Services

For Driver Education, the Driver Education Teacher and Driver Retraining Instructor job titles require pre-entry undergraduate training in driver and safety education.

Theoretically, the manpower resource pool and pre-entry training capacity for these two job titles are more than adequate. The pool is composed of all primary and secondary education teachers. Practically, the problem is to influence teachers and potential teachers to pursue a career in driver education. There has been a reluctance on the part of career teachers to concentrate in driver education.

Traditionally, the practical problem of staffing driver education jobs has been resolved by relying upon part-time instructors in secondary driver education programs. Often, teachers already teaching in other education programs take qualifying driver education courses during the summer and then teach driver education as a secondary duty during the school year. This approach has been

possible because of minimal qualifying course requirements. Qualifying pre-entry requirements have been as low as one college level course in driver education. With the advent of the National Highway Safety Program, pre-entry requirements have been raised. The generalized job description presented in Volume I, and consistent with the National Highway Safety Bureau draft program manual, specifies an 18 semester hour program. With increased requirements, it is doubtful whether reliance upon part-time teachers will continue to be a feasible approach. (Alternative 1 and Alternative 2 manpower requirements throughout this report have assumed full-time teachers.) Teachers have been reluctant to enter driver education when minimum qualifying courses were specified. It seems unlikely that they will become more receptive as requirements are increased.

Driver retraining faces an additional problem. Where driver retraining exists, pre-entry training requirements for retraining instructors are seldom as high as for secondary driver education teachers. It is not uncommon for Driver Retraining Instructors to more nearly match Driver License Examiners than Driver Education Teachers in education and experience. The driver retraining program envisioned in Volume I requires a major upgrading in pre-entry education.

Driver Education Supervisors and Driver Education Program Specialists require a master's degree in driver or safety education. Appendix A indicates a sizeable deficiency in Supervisors currently employed. However, as pointed out in Volume I, Supervisors were belatedly added to the study, and little field data was collected. Current manning levels are not nearly as low as they appear in Appendix A data.

Moreover, because of experience requirements, the manpower resource pool for Supervisors and Program Specialists will consist of Driver Education Teachers. Thus, the problem of staffing Supervisor and Program Specialist positions quite probably reduces to the problem of obtaining full-time Driver Education Teachers. If a potential teacher will commit himself to a career in Driver Education, he will quite probably be available for promotion to Supervisor and Specialist positions. If capacity figures shown in Appendix A are interpreted as enrollment, then the resource pool from which Program Specialists and Supervisors can be recruited should be ample, i.e., large numbers of Driver Education Teachers will be educated. The practical problem at the master's degree level may be one of financing graduate education.

Assuming that potential teachers can be influenced into Driver Education, sufficient capacity exists to provide pre-entry training at

all three manning levels. Post-recruitment training is unavailable. Some refresher training has been identified for Driver Education Supervisors, Driver Education Teachers, and Driver Retraining Instructors. The refresher training identified is inadequate and must be expanded.

Because of raised entering educational requirements, retraining of currently employed Driver Education Teachers should be considered. Sufficient educational capacity appears to be available to do so.

Thus, for Driver Education, difficulty may be experienced in staffing. Manpower resources and pre-entry training capacity exist in abundance. The challenge will come in influencing manpower to enter Driver Education.

In the Emergency Medical Services Program, no significant problems are foreseen in staffing Emergency Medical Services Field Representative jobs. The generalized job description specifies, as the entering educational requirement, a bachelor's degree in education or physical education and safety and, as the experience requirement, a minimum of two years as a public health inspector, teacher, or the equivalent. We expect recruitment to occur primarily from the pool of secondary physical education and driver education teachers. Given the relatively large pool and the relatively few requirements, no major recruitment deficiencies should develop.

The Emergency Medical Services Program Specialist presents a unique problem. The program is new and requires a high degree of professional competence in the Program Specialist job. To provide that competence, the job description has specified a master's degree in public health administration. However, it is doubtful that personnel with the required degree will desire to pursue an entire career in the Emergency Medical Services Program. More likely, the Program Specialist job will be viewed as one of a series available in the public health field through which an individual may rotate in the course of his career. The Emergency Medical Services Program will be in competition with other public health programs for these highly qualified personnel. In the early years, as the EMS program is being formulated, we expect that national and state emphasis plus the challenge of initiating a new program will cause most Program Specialist jobs to be filled. In late years, however, as implementation is accomplished, one would expect relatively high turnover in the job title and difficulty in obtaining and retaining personnel.

Pre-entry training required for the Emergency Medical Services job titles is broadly applicable outside of EMS, (e.g., physical education and public health administration). Capacity is, therefore, presumed to be far in excess of Emergency Medical Services requirements.

Complete training for Emergency Medical Services Program Specialists identified in Appendix A is a particular public health program oriented to accident control and research given at the University of North Carolina. Complete training identified for Emergency Medical Services Field Representatives is an instructor training course offered in Ohio. Although these courses are unusually applicable to the Emergency Medical Services Program, more generalized courses meet pre-entry requirements.

Post-recruitment for both job titles is entirely unavailable and must be provided.

No refresher training has been identified for either job title and must also be provided.

Thus, as with Driver Education, difficulty may be experienced in staffing the Emergency Medical Services Program. The problem is to influence the distribution of manpower resources and channel qualified personnel into Emergency Medical Services.

Actions available to overcome difficulties outlined in this chapter are discussed in Chapter V.

5. FOR TWO PROGRAMS REQUIRING BOTH HIGH SCHOOL AND COLLEGE SKILL LEVEL JOBS, ATTAINMENT OF ALL MANNING LEVELS SHOULD BE POSSIBLE, BUT EXPANSION OF POST-RECRUITMENT AND REFRESHER TRAINING CAPACITY IS NEEDED TO SATISFY MINIMUM LEVELS

Programs requiring both high school and college skill level jobs will be discussed in two groups. The first group is composed of:

- Pedestrian Safety
- School Bus Safety

The Pedestrian Safety Program includes two job titles: Traffic Records Program Analyst and Pedestrian Safety Program Specialist. The first of these is the same job title that appears in the Traffic Records Program. Comments on recruiting and training personnel for this job title, made in major point 3 above, apply also to the Pedestrian Safety Program. No major staffing and training problems are anticipated.

Similarly, entering educational and experience requirements for Pedestrian Safety Program Specialists and Driver Education Program Specialists and Supervisors are fundamentally the same. Consequently, staffing for Pedestrian Safety Program Specialist jobs will face the same difficulties as staffing for Driver Education Program Specialists and Supervisors. However, Alternative 1 requires only 58 Program Specialists nationally. No difficulty in attaining even Alternative I manning levels should be encountered.

Again, neither post-recruitment nor refresher training for Pedestrian Safety Specialists is available. Such training for this job title is primarily a review of recent developments in pedestrian safety. Course content must be developed. Other than this, no major problems are foreseen.

School Bus Safety utilizes three job titles: School Bus Program Specialist, School Bus Driver Training Officer, and Motor Vehicle Inspector or Motor Vehicle Station Inspector.

The Inspector job titles are discussed in major point 1 of this chapter. No major problems should develop in recruiting and training at minimum levels.

School Bus Driver Training Officers are recruited from Driver Education Teachers. In fact, Training Officers used in the Alternative 2 program in Volume I are Driver Education Teachers who assume additional responsibilities in School Bus Safety. There should be no problems, therefore, in staffing at minimum levels. Alternative 1 requires an average of only nine full-time Training Officers per state in 1977. There should be no major problems in staffing even Alternative 1 requirements.

School Bus Program Specialists are to be recruited from a variety of secondary teaching fields. There should be no hindrance to

the free flow of manpower resources into jobs. Requirements even at the Alternative 1 level are low in relation to supply, and no staffing problems should be encountered. In fact, persons currently employed as School Bus Program Specialists exceed the Alternative 2 1977 requirement.

Some post-recruitment training is available for Training Officers; little is available for Program Specialists. No refresher training has been identified for either job title. Training for these job titles is not unusual or complex and should not present major problems.

6. FOR FIVE PROGRAMS REQUIRING BOTH HIGH SCHOOL AND COLLEGE SKILL LEVEL JOBS, ATTAINMENT OF MINIMUM MANNING LEVELS SHOULD BE POSSIBLE, BUT POST-RECRUITMENT AND REFRESHER TRAINING CAPACITY MUST BE EXPANDED TO MEET MINIMUM LEVELS

The second group of programs requiring both high school and college skill level jobs is composed of:

- Alcohol in Relation to Highway Safety
- Accident Cleanup
- Identification and Surveillance of Accident Locations
- Highway Design, Construction, and Maintenance
- Traffic Control Devices

For Alcohol in Relation to Highway Safety, no unusual entering educational requirements are specified for either the Alcohol Technical

Specialists or Breath Examiner Specialist. No other unusual characteristics have been identified which would inhibit flow of manpower resources into the job titles.

However, both job titles specify experience requirements which limit the effective manpower pool to personnel in Police Traffic Services or public health programs. Because of difficulties in staffing Alternative 1 levels in the Police Traffic Services program, attainment of Alternative 1 levels of the Breath Examiner Specialist are doubtful; attainment of minimum levels should be possible. The Alcohol Technical Specialist job utilizes personnel with experience in public health programs, and some states could experience staffing problems in early years. With an Alternative 2 nationwide requirement of about 200, an average of about four Specialists per state is needed. Given 10-year implementation periods, states should be able to reach this level. In the long run, therefore, staffing at minimum levels for the alcohol program should be possible.

Pre-entry training for both job titles is presumed to be available. No complete post-recruitment training for Alcohol Technical Specialists has been identified. It must be provided. Substantial post-recruitment training, such as that offered at Indiana University, already exists for Breath Examiner Specialists. In fact, capacity exceeds new requirements. No major problems, exclusive of funding perhaps, are anticipated.

Some refresher training for Breath Examiner Specialists has been identified, but none for Alcohol Technical Specialists. Capacity in this training category must be increased, but doing so should not encounter major obstacles.

In Accident Cleanup, State Wrecker Operator jobs are to be filled by high school graduates with no previous experience. There are no inherent limitations on the flow of resources into the jobs. Moreover, personnel in this job title devote only part time to Accident Cleanup. Theoretically, therefore, even Alternative 1 manning levels, averaging about 200 per state, should be attainable. Practically, unless encouraged by the National Highway Safety Bureau, it appears unlikely that state governments will consider the program of sufficient priority to reach even Alternative 2 levels.

State Wrecker Field Representative jobs draw upon the teacher resource pool for staffing. Because of the relatively high ratio of resources to requirements, no staffing problems even at Alternative 1 levels should be encountered.

Post-recruitment training is available in only two states for State Wrecker Operations and nowhere available for State Wrecker Field Representatives. Neither is refresher training available for any state for either job title.

Although little training is now available, courses offered in Maryland and Ohio should provide guidance in developing a standardized curriculum. Training should not be complex.

The last three programs are ordinarily associated with state highway engineering departments.

The Identification and Surveillance Program involves two job titles: Accident Site Investigator and Accident Site Investigator Aide. Experience requirements for these job titles necessitate recruitment from highway department and state police/highway patrol personnel. The manpower pool is therefore assured. No unusual requirements should prevent flow of manpower into these job titles. Again, theoretically, sufficient priority on this program in departments of highway departments and state police/highway patrols could virtually guarantee adequate recruits, even at Alternative 1 levels. As a practical matter, however, Alternative 1 requirements seem high enough to raise serious doubt that sufficient priority will be given to attain Alternative 1 levels. Alternative 2 levels are feasible, however.

A recruitment problem can be identified. Accident site investigation is a very specialized activity. It is hardly a career field. It is doubtful, therefore, that highway engineers, traffic engineers, engineering aides, and police traffic servicemen can be expected to stay within the program indefinitely. If such assignments are considered

to be permanent, recruitment may suffer. If they are not considered to be permanent, a high turnover rate can be expected--personnel are not likely to voluntarily stay indefinitely in these positions. With the resource pool assured, minimum levels should still be attained, and turnover should be a training rather than a recruitment problem.

Complete post-recruitment training for both job titles is nonexistent. Sufficient capacity must be provided to accommodate a still undetermined turnover rate. Some refresher training has been identified for Accident Site Investigator Aides (a follow-up to partial post-recruitment training) but none for Accident Site Investigators.

Development of curriculum content for the training personnel in these job titles will be heavily dependent upon research results. Formulation of initial courses, being based upon currently available knowledge, should not present major problems.

The Highway Design, Construction, and Maintenance Program includes two high school skill level job titles: Engineering Aide, Safety, and Highway Safety Site Officer.

Entering experience for the site officer is that of a construction and maintenance foreman or supervisor. No unusual requirements should restrict the flow of supply, and no recruitment problems are anticipated. In 10 years, if the program were to receive sufficient priority, Alternative 1 levels could be attained.

No post-recruitment or refresher training for this job title has been identified. Training is not complex.

Engineering Aides, Safety, are recruited from existing engineering aides working in the various activities of highway departments. No restrictions on the flow of existing aides into this job title (or the flow of high school graduates into vacated aide positions) have been apparent, and no recruitment problems are anticipated. Again, in 10 years, if sufficient priority were placed on the safety program, Alternative 1 levels could be attained.

Dimensions of the training task are uncertain. Some post-recruitment training has been identified but, as explained in Chapter III, because of West Virginia training, numbers are probably overstated. More importantly, basic technical training varies by state. Most states have some amount of training of varying quality. As pointed out in the job description, if this pre-entry training is not now provided, it should be included as part of the post-recruitment training program. Course content for this type of training is well established. Although the training is more technical than for most high school skill level jobs, it is not advanced enough to pose major educational problems.

Refresher training must be expanded. Highway Engineer, Safety, is the only college skill level job title in the Highway Design,

Construction, and Maintenance Program. No recruitment problems are anticipated for staffing Highway Engineer, Safety, jobs at minimum levels. Personnel currently filling these jobs already exceed Alternative 2 requirements. Alternative 1 requirements are so high as to make attainment doubtful. Post-recruitment training for these engineers is inadequate and should be improved and expanded. No refresher training has been identified.

Highway Engineers and Engineering Aides will probably resist indefinite assignments to the Highway Design, Construction, and Maintenance Program just as they will to Identification and Surveillance. Relatively high turnover rates can be expected, therefore, for Highway Engineers, Safety, and Engineering Aides, Safety, and training capacity must accommodate these turnover rates.

The Traffic Control Device program includes two high school skill level job titles: Engineering Aides, Traffic, and Traffic Control Device Technician.

No unusual requirements have been identified for Engineering Aides, Traffic, which would restrict the flow of personnel into these jobs. No major recruitment problems are anticipated to staff at Alternative 2 levels. (Traffic positions seem to hold less inherent interest for high school graduates than other highway engineering

functional areas. Some increase in persuasion, i.e., priority, may be necessary to ensure adequate manning.) Alternative 1 levels are high enough to make attainment doubtful. Post-recruitment training for Engineering Aides, Traffic, is almost completely lacking. As with Engineering Aides, Safety, the availability of "pre-entry" technical training varies by state, and in some instances may need to be included as part of post-recruitment training. No refresher training has been identified.

Entrance requirements for Traffic Control Device Technician jobs specify education and experience in electricity or electronics. These specialized requirements reduce the effective resource pool. However, Alternative 2 1977 national requirements are only about 50% higher than the number employed in 1968. Alternative 2 levels should be attainable in 10 years, but Alternative 1 levels appear to be too high to be satisfied.

No post-recruitment or refresher training has been identified for the job title.

Traffic Engineers represent the college skill level personnel required for this program. These professionals are among the most highly skilled in the Highway Safety Program. However, educational capacity for producing graduate level traffic engineers is substantial.

In fact, several institutions have experienced difficulty in filling available capacity in their traffic engineering curriculum. Over 10 years, the capacity seems adequate for minimum staffing levels. It is probably not adequate for maximum, Alternative 2, levels. At the Alternative 2 levels, therefore, there should be no national recruitment problem. Nevertheless, there may be a distribution problem among states, with some states experiencing difficulty in filling requirements.

Post-recruitment training is largely unavailable. Substantial refresher training devoted to review of basic traffic engineering skill areas has been identified.

V. RECOMMENDATIONS

V. RECOMMENDATIONS

Previous chapters in this and earlier volumes have presented certain major conclusions with respect to state safety specialist manpower:

- There are large numbers of safety specialists currently employed in state highway safety programs.
- If current recruitment efforts are continued, deficits in employed safety specialists could develop.
- If recruitment efforts are expanded, minimun manpower requirements can probably be attained by 1977, but attainment of maximum requirements is doubtful.
- Significant educational capacity exists or is planned, but capacity must be expanded for:
  - Refresher training for high school skill level jobs
  - Post-recruitment training for college skill level jobs
  - Refresher training for college skill level jobs
- Some variation in staffing will occur among programs and states.

On balance, and to summarize for all 50 states and the 17 programs for which this study presents data, adequate staffing of safety specialist jobs in state highway safety programs over the next decade cannot be assumed. Difficulties--challenges--do exist. To assure adequate staffing, appropriate actions must be taken.

This chapter recommends actions that can be taken to assure adequate staffing in state highway safety programs. Recommendations are presented in two series. The first series is directed to state governments and constitutes an action plan for the states. The second series presents actions for consideration by the National Highway Safety Bureau.

RECOMMENDATIONS TO STATES

To assure adequate staffing of state highway safety programs, we recommend that state governments:

1. DEVELOP THEIR INDIVIDUAL SAFETY STAFFING PLANS IN DETAIL

Since they vary in characteristics, states should individually develop long-range staffing plans to assure safety manpower adapted to their particular needs.

In doing so, states should rely upon National Highway Safety Bureau guidance and the methodology and results of this study, as well as knowledge of their own needs and characteristics.

Specifically, states should develop annual manpower requirements by job title and program, as done in Volume I. Manpower requirements Alternative 1 and Alternative 2, presented in Volume I, should provide useful guidance to each state. Particular attention should be directed to those instances where State Estimated requirements fall outside of the range estimated by Alternative 1 and Alternative 2.

Following the development of safety manpower requirements, states should examine their estimates against the estimated manpower resource pool available to the state, as done in both Volume II and in Chapter II of this volume. Attention should be directed to determining whether requirements constitute a realistic portion of the manpower pool available to the state. Occasionally, previously estimated requirements may need to be adjusted. Some safety programs may require a priority designation, i.e., requirements in some programs will be reduced while requirements in other programs will be maintained.

Having defined requirements, a staffing and recruitment plan should be developed. The plan should show by job title and program the following.

- The annual recruitments necessary to build manning levels to the required levels in the year selected for total implementation

- The total annual employees

Calculation of annual recruitments for each job title should allow for:

- Turnover

- Impact of recruitment upon other job titles

  - "Recruitment" of Police Traffic Services Officers, for example, is a promotion of Police Traffic Services Patrolmen and necessitates actual recruitment of an equal number of Patrolmen.

  - There can be an impact upon non-safety specialist job titles. Highway Engineers, Safety, for example, will be recruited from highway engineers. An equal number of civil engineers must, therefore, be recruited to fill the vacated highway engineer positions.

In the course of field visits, Booz, Allen & Hamilton staff often encountered the comment that "it is useless to plan, for plans never last." To this, three comments are relevant:

- Plans should be as realistic as possible, not excessively optimistic.

- Plans will almost certainly change and for good reason. But greater progress is made toward stated objectives with plans than without.

- Plans are not forecasts of what will happen. They are statements of goals for managers to attain. Accomplishment of plans is in many respects the major task of management.

2. DEVELOP A RECRUITMENT PROGRAM SPECIFICALLY FOR STAFFING HIGHWAY SAFETY JOBS

Most highway safety programs are under the management jurisdiction of state departments with broad interests, e.g., public health, education, state police, highway, and motor vehicle. As demonstrated in Volume II, if past recruitment efforts pursued by these departments are followed, highway safety programs will not receive the priority necessary to achieve desired manning levels. Also, as shown in Chapter II of this volume, the problem is for highway safety to enlarge its proportion of employees in the manpower pool available to state government. That is, the task is not alone to hire more people, for all state programs will probably do this. The task is to attain a relatively larger percentage of aggregate new state employees than highway safety has been getting. To do so, highway safety programs must receive some recruitment priority.

The severity of this problem can be illuminated for a state by comparing requirements to the resources pool as done in Volume II and Chapter II of this volume. Some states may find that a special recruitment effort may not be needed.

The Governor's Highway Safety Program Director is the focal point of the highway safety program, and with his staff should develop a recruitment program to staff the state's highway safety programs. Some actions are as follows:

- Convince operating department heads and the legislature that safety specialist jobs "deserve" a higher proportion of new recruits, i.e., highway safety requires higher priority.

- Establish required job titles in the state government personnel system.

- Develop recruitment literature to publicize safety specialist jobs and opportunities and thereby influence the distribution of supply.

- Establish a working relationship among the Governor's Highway Safety Program Director's staff, the state personnel office, and the personnel offices of the operating departments which contribute to the goals of the highway safety program.

To aid in the development of the recruitment program, the Governor's Highway Safety Program Director should consider including a personnel specialist on his own staff.

3. ASSURE THAT BENEFITS IN STATE SAFETY SPECIALIST JOBS ARE COMPETITIVE WITH ALTERNATIVE JOBS

The assumption that resources from the manpower pool will flow into available jobs presupposes that safety specialist jobs offer benefits competitive with similar jobs. If benefits are not competitive, obstacles

to the flow of resources are created, and jobs will not be filled. Prime among benefits is salary. Where state government salaries are unrealistically low, vacancies will undoubtedly occur. The Governor's Highway Safety Program Director should give careful attention to assuring the competitive attractiveness of state safety specialist jobs.

4. CONSIDER PROGRAMS TO PROVIDE PRE-ENTRY TRAINING WHEN EXPERIENCE INDICATES A NEED

If the manpower supply is large enough and employee benefits are competitive, resources should flow into available jobs. Evidence presented in this study suggests that supply, defined in terms of pre-entry training, should be large enough for most jobs. We believe that, at least for several years, states should operate on this assumption in planning recruitment efforts. If, after several years experience, difficulty is experienced in filling recruitment goals, other actions must be attempted. States can seek to create their own supply.

There is very good evidence that the supply of basic skills (i.e., high school and college graduates) is adequate. If shortages develop, they will probably develop for job titles requiring specialized entering educational requirements (e.g., Traffic Engineer and Traffic Control Device Technician). In this event, states should consider programs to provide "pre-entry" training themselves. Under such

programs, for example, states would recruit on a tentative basis highway or civil engineers and finance the recruit's graduate education to the degree required.

The attraction of this approach for the employee is that it expands his opportunities. Being more highly trained, he is normally worth more in the job market. The disadvantage to the state, of course, is that if the state is not competitive, the employee will attempt to take advantage of his new opportunities. Turnover could be high. Normally, employees under such programs are required to agree to stay with the state government for a specified period--for example three years--following training.

Such programs are expensive. There is a tradeoff at some point in raising employee benefits rather than pursuing this kind of program. However, since raising employee benefits often affects an entire state personnel system, this kind of special program may be more feasible and less costly.

5. ESTABLISH A DRIVER LICENSING/INSPECTION CAREER FIELD APART FROM POLICE TRAFFIC SERVICES

As pointed out in Chapter IV of this volume, attainment of Police Traffic Services manning levels may be restricted because of noneducational qualifications, such as physical characteristics and condition.

To alleviate this problem, we recommend limiting Police Traffic Services jobs to those tasks specifically requiring these noneducational qualifications.

If states experience difficulty in attracting Police Traffic Services recruits, they should reexamine these noneducational qualifications to determine if they are necessary.

In many states, the following job titles often require Police Traffic Services experience or are performed by Police Traffic Service Patrolmen.

- Motor Vehicle Station Inspector
- Driver License Examiner
- Driver License Hearing Officer

We do not believe that these job titles require all the qualifications of Police Traffic Service Patrolmen. They can be grouped together as a separate career field with Driver License Examiner as the entering job title. Job descriptions presented in Volume I have been written to allow for this approach. Supervisory Examiners, Hearing Officers, and Station Inspectors provide promotion possibilities from the basic Examiner job title.

6. ESTABLISH A DRIVER EDUCATION CAREER FIELD

Chapter IV outlined a potential problem for the Driver Education Teacher job title. Increased entering educational requirements imply

a need for full-time Driver Education Teachers, but teachers historically have been reluctant to enter driver education as a career. To alleviate this problem, states should consider an informal driver education career field. This report is designed to provide the basis for this by presenting several job descriptions written to allow lateral flexibility and promotional opportunities to teachers who elect to enter driver education. Such job titles are:

- Driver Training Program Specialist
- Driver Education Supervisor
- Driver Retraining Instructor
- Emergency Medical Services Field Representative
- Pedestrian Safety Program Specialist
- State Wrecker Field Representative
- School Bus Program Specialist
- School Bus Driver Training Officer

Salary schedules must, of course, be designed to support this approach.

Thus, the Driver Education Teacher has available a wide range of job opportunities. In addition, he serves as a ready manpower resource for staffing several job titles.

An alternative solution to the problem is also presented in this study, i.e., reliance upon technological improvements to reduce teacher requirements. Alternative 2 for the Driver Education Teacher job title employs driving ranges as a method of reducing teacher

requirements. Should states experience shortages of full-time Driver Education Teachers, greater reliance upon such technological improvements to reduce teacher needs can be considered.

7. CONSIDER THE CREATION OF AN EMERGENCY MEDICAL SERVICES CAREER FIELD

Chapter IV points out the potential difficulty of retaining Emergency Medical Services Program Specialists. Provision of pre-entry training, i.e., masters degree in Public Health, as suggested in major point 4 of that chapter, offers one approach to the problem. However, the long-term solution may lie in the creation of an Emergency Medical Services career field.

EMS is a new program whose potentials are not yet completely understood. In the early years, staffing for job titles presented in this report must come from established disciplines, i.e., public health, teaching. In the future, EMS may create its own manpower pool upon which state governments can call. In this respect, EMS has characteristics similar to driver education. Administration occurs at the state level--operation at the local level. A well-developed program at local levels, including administration, could provide the manpower base for staffing state government jobs. To facilitate such a development, creation of an EMS career field should be considered.

8. ESTABLISH ROTATING ASSIGNMENTS FOR THE IDENTIFICATION AND SURVEILLANCE AND DESIGN, CONSTRUCTION, AND MAINTENANCE PROGRAMS

As pointed out in Chapter IV, if jobs pertaining to the Identification and Surveillance and Design, Construction, and Maintenance Programs are established as career-type positions, they may not be filled. These programs and jobs are specific safety activities of much larger efforts--enforcement of traffic laws, designing highways, etc. Personnel who will work in these programs and fill the jobs tend to identify with the larger effort. Safety specialist jobs should normally be considered as assignments of reasonable length during the career of more broadly oriented personnel. Job titles, therefore, should be established as working titles rather than civil service titles.

An advantage of this approach is the greater safety awareness that rotating personnel will possess after completing the safety assignment and returning to broader duties.

9. ASSUME RESPONSIBILITY FOR PROVIDING POST-RECRUITMENT AND REFRESHER TRAINING TO HIGH SCHOOL GRADUATE SKILL LEVELS

Post-recruitment and refresher training to high school graduates is not complex. Not only is it within the capability of states, but states already operate sizeable in-service training programs. To attempt to

change the present system would cause serious disruptions with no apparent benefits. The National Highway Safety Program should build upon this existing educational capacity.

States, then, should provide post-recruitment and refresher training for high school skill level jobs. They should assume the responsibility for defining the quantity of training and educational facilities required. They should manage and operate the training facilities. However, as will be discussed later, it is appropriate for the Federal Government to provide:

- Guidance as to curriculum content and training standards (perhaps, for example, Federal established student/faculty ratios)
- Funding support

It is also anticipated that instructors for this state-supplied training will themselves be trained in Federally sponsored programs.

Nevertheless, because of the relatively sophisticated training required, states and the National Highway Safety Bureau should consider exempting the following job titles from this training and including them in training for college graduate job titles:

- Driver License Hearing Officer
- Accident Site Investigator (Police Traffic Services Officer)
- Police Traffic Services Program Specialist

10. DEVELOP A TRAINING PROGRAM SPECIFICALLY FOR HIGHWAY SAFETY JOBS

As in the case of recruitment, a state should develop a specific highway safety training program. Responsibility for developing both the recruitment and training programs can be vested in the same individual. His task is to serve as the focal point, leading influence, and coordinator of highway safety recruitment and training across operating departments.

11. ESTABLISH AN ORIENTATION PROGRAM IN HIGHWAY SAFETY FOR STATE EMPLOYEES

A wide range of state employees are directly or indirectly involved in the highway safety program but are not safety specialists. Prime among these are supervisors in the Motor Vehicle Registration Program, top management in the State Police, and administrators in highway engineering departments. These employees can benefit from an understanding of highway safety and its relationship to their activities. States should provide such training as part of general orientation programs.

RECOMMENDATIONS TO THE NATIONAL HIGHWAY SAFETY BUREAU

For its role in assuring adequate staffing of highway safety programs in state governments, we recommend that the National Highway Safety Bureau:

1. SPECIFY MORE CLEARLY MINIMUM ACCEPTABLE PROGRAMS

As discussed in Volume I, current National Highway Safety Bureau guidelines are too general to allow precise determination of minimum acceptable programs. States are interested in such information as a basis for development of their programs and manpower requirements.

The Safety Bureau should specify guidelines in terms of performance standards. Ultimately, guidance should be related to accident reduction capability, and the Safety Bureau should indicate to the states the most cost/effective program alternative to achieve highway safety objectives. However, given the condition of current knowledge, these objectives may lie some years in the future.

In the absence of such definitive knowledge, and to provide timely guidance to states in developing manpower plans, we suggest that this report, including program alternatives described in Appendix D of Volume I, be issued to the states as guidance in developing state safety manpower plans. Many states are uncertain

as to how to proceed in manpower planning, and we believe that issuance of the report will be helpful to them.

We emphasize again that states should be allowed to respond and indicate why program alternatives described in this report are unsuited to their environment. Justified alternative programs developed by the states and adapted to state needs should not be excluded.

2. ESTABLISH AN IMPLEMENTATION DATE ON WHICH MANNING LEVELS ARE TO BE ATTAINED

Excessively rapid buildup of programs can be inefficient. Longer buildup periods allowing proper sequential phasing of the various aspects of the buildup can be more efficient. Particularly relevant to this study is the impact of buildup on training capacity. A rapid build-up in early years would either:

- Require buildup of substantial capacity in early years which would not be needed in later years
- Result in untrained employees working on jobs, but waiting until training capacity could accommodate them

The selection of an implementation date by the Safety Bureau will allow the states to develop recruitment and training plans assuring a steady flow of personnel in an orderly manner.

This study has assumed the end of fiscal year 1977 to be the implementation date for all programs. Selecting an implementation date involves balancing the urgency of ends to be attained, the buildup efficiency likely to be associated with various dates, and the availability of resources, i.e., financing over periods of varying length.

3. ESTABLISH PRIORITIES AMONG PROGRAMS

Given the state of current knowledge, it is now an a priori proposition that for a given expenditure of money, not all programs will contribute equally to the objectives of highway safety. Cost/effectiveness studies should be performed to determine which programs are most productive in attainment of highway safety objectives. Such programs should be emphasized and given priority. In some cases, minimum alternatives may prove uneconomical and reduction may be necessary in planned manpower staffing levels. Some programs could be abolished altogether. Others could be strengthened. Manning levels can be more adequately assured and manpower resources more adequately utilized if the truly productive programs are identified and given priority.

4. CONSIDER PLACING PRIORITY ON MANAGEMENT AND DATA PRODUCING PROGRAMS

In addition to affecting manning levels, priorities are a function of time. Some programs can be staffed before others,

i.e., implementation dates need not be the same for all programs. Certain programs should be staffed first because they provide the basis for developing the remainder of the highway safety program. These programs are:

- Planning and Administration
- Traffic Records

(We are not suggesting that these programs are more cost/effective in the precise sense of the term, but that they logically precede implementation of other programs. For example, Traffic Records should produce data that cost/effectiveness studies require.)

Our analysis in Chapter IV of this volume indicates no major recruitment or training problems in staffing these two programs.

5. DEVELOP STANDARDIZED CURRICULA AND PERFORMANCE STANDARDS FOR HIGH SCHOOL AND COLLEGE SKILL LEVEL POST-RECRUITMENT AND REFRESHER TRAINING

If the Federal Government is to establish a National Highway Safety Program and create a series of standardized job titles, then it should take steps to assure high quality, nationally consistent training for personnel filling those job titles. At a minimum, efforts to standardize should apply to post-recruitment and refresher training.

One critical area for standardization lies in curriculum content. To assure high-quality material and similar training for all states,

the National Highway Safety Bureau should develop standardized curricula for post-recruitment and refresher training for each job title. Development of curricula in early years may well consist of summarization and synthesis of the best of existing training materials. Later, results from highway safety research projects should be fed into the curricula.

Consideration can be given to standardization of specialized safety-oriented pre-entry training, such as Driver Education Teacher preparation curricula.

Standardized curricula should be made available to agencies and institutions providing training to safety specialists.

6. DEVELOP PERFORMANCE STANDARDS AND CRITERIA FOR TRAINEES AND FACILITIES

To assure high quality and uniform training, the National Highway Safety Bureau should develop a series of performance criteria for training facilities. These criteria should be designed to assure that selected characteristics of training facilities (e.g., student/teacher ratios, meet minimum standards high enough to assure quality training).

Similarly, performance standards should be developed for safety specialist trainees. Ideally, standardized achievement tests to be

administered to employees at the end of training courses would be provided. Consideration can also be given to development of pre-entry achievement tests to assure adequacy of entering education.

Adherence to these performance standards could be prerequisite for receipt of Federal funding.

7. ASSUME RESPONSIBILITY FOR PROVIDING POST-RECRUITMENT AND REFRESHER TRAINING FOR COLLEGE SKILL LEVEL JOBS

College skill level jobs require a high degree of professional competence and a broad perspective. State government in-service training agencies are often unequipped to provide training with these characteristics. Moreover, many of the college skill level jobs require relatively few personnel. Provision of such training by each individual state could involve uneconomical use of training resources--each state would need to generate a training capability which would quite probably be underutilized much of the time. For these reasons, the Federal Government should assume responsibility for providing post-recruitment and refresher training for college skill level jobs. Assumption of this responsibility by the Federal Government should lend importance to highway safety that could not be achieved if state governments alone provide the training.

The National Highway Safety Bureau should assume responsibility for organizing and administering such training programs, perhaps on a regional basis. Training could be made available to states for state employees on an annual state quota basis.

Consideration should be given to including in this Federally sponsored training:

- Driver License Hearing Officers
- Accident Site Investigators (Police Traffic Services Officer)
- Police Traffic Services Program Specialists
- Instructors providing in-service training for high school skill level jobs

8. ANTICIPATE THE NEED FOR DIRECT SAFETY BUREAU FUNDING TO TRAINING PROGRAMS

We have recommended two training efforts, one for high school skill level post-recruitment and refresher training and one for college skill level post-recruitment and refresher training. Both efforts will require direct Safety Bureau funding.

Numerous Federal programs now provide educational and training funds to the states. As a general statement, the Safety Bureau cannot rely on these other programs to fund training for the National Highway Safety Program.

- Post-recruitment and refresher training is specialized highway safety training. It prepares individuals for specific jobs, and the jobs have been created to accomplish the expressed purposes of the National Highway Safety Bureau. It does not normally prepare individuals generally for jobs outside of highway safety.

- It is unlikely that other Federal agencies with different programs and priorities will see fit to concentrate their resources on highway safety training. The states cannot be held responsible for non-compliance if they are dependent upon resources from Federal agencies with little primary interest in highway safety.

Therefore, the National Highway Safety Bureau should take steps to provide direct NHSB funding for safety training. If the Safety Bureau expects funding constraints, it should select a late implementation date consistent with expected funding limitations.

9. UNDERTAKE COORDINATION WITH OTHER FEDERAL AGENCIES

Numerous Federal programs with manpower requirements and training implications have impact on state governments, often on the operating departments involved in highway safety. Such programs present problems and opportunities to the Safety Bureau. Two separate Federally sponsored programs may each generate manpower requirements that individually are reasonable, but when combined are difficult for a single state agency to accommodate. Mention has already been made of the current emphasis on crime and its potential impact on the Police Traffic Services Program. On the other hand, Federal programs

may also overlap at the state level so that it is a matter of interpretation as to which Federal agency should assume what responsibilities. In these cases, the Safety Bureau may find opportunities to utilize the resources of other agencies.

Thus, the National Highway Safety Bureau should identify those Federal programs and agencies with whom coordination in the provision of highway safety training resources is desirable.

10. ESTABLISH A POLICY ON SUPPORT TO PROGRAMS ABOVE MINIMUM LEVELS

States vary in their capabilities and interests in highway safety, and some states already exceed several minimum programs identified in this report. These "progressive" states are normally the more wealthy ones and are consequently more attractive to potential employees. If these states provide attractive safety job opportunities, manpower resources may flow into them, and less wealthy states may find it difficult to obtain manpower to attain minimum staffing levels.

Similarly, within any state, the level of particular programs may be a function of the current emphasis and energy of program officials rather than of the relative benefit of the programs to highway safety. The most cost/effective programs may not be popular or well publicized. All programs may be in competition for many of the same manpower

resources, and if all attempt to expand simultaneously, the most cost/effective programs may fail to attain adequate staffing levels because of competition from the advanced, older, and better known programs. In that event, the most cost/effective programs will fail to make their full contribution to highway safety and manpower resources will not be most effectively utilized.

Volume I suggests that states calculate their own manpower requirements and, if their estimates fall within the range set by Alternative 1 and Alternative 2, the State Estimates should be accepted as reasonable indications of requirements. We emphasize that this is a methodological suggestion only. It is the method adopted for arriving at an accurate estimate of manpower requirements. It does not imply a policy recommendation that all "reasonable" state manpower estimates be accepted for Federal funding purposes.

If a state already has a program whose manning is above minimum levels, it is likely that requirements will continue to grow for this program just as for others. If the state itself wishes to fund and operate these programs in excess of minimum Federal levels, it should certainly do so. The National Highway Safety Bureau, however, can affect the manpower picture by distribution of its funds. Will it open job opportunities by supporting expansion of all programs

indiscriminately on a state-initiated "first come, first served basis," or will it open opportunities in programs of greatest cost/effectiveness or in states most in need?

The channeling of funds to programs or states below minimum safety standards does not necessarily imply that the progressive states will suffer unduly. Every state has programs below the minimum level, especially the "new" programs, e.g., Emergency Medical Services. The progressive states are commonly the heavily populated states. In any individual program, the needs of the large states are significantly higher than for the average states. For example, it is not unlikely that the funding required to bring all programs in New York to minimum levels will far exceed the amount required to bring all programs in Wyoming to minimum levels, although Wyoming may currently have a greater number of programs below minimum safety standards.

As has been pointed out at various points throughout this report, the safety specialist staffing task is primarily one of obtaining proper distribution of manpower resources. The National Highway Safety Bureau can influence the distribution of manpower resources by its distribution of financial resources. Manpower will tend to go where jobs are available. If the Safety Bureau distributes funds so as to

generate safety specialist jobs in the programs where they are most needed, it can have a major impact on assuring adequate staffing of priority manpower areas. It can thus affect--perhaps decisively--the success of the National Highway Safety Program.
